

How much potential is your production wasting every day?

5 SIGNS THAT YOUR PLANT IS READY FOR AN MES SYSTEM

Attention production managers, production supervisors, and plant managers:

There is often a huge gap between planning and reality on the shop floor. The causes? Manual processes, a lack of transparency, and a patchwork of individual solutions. A modern **MES (Manufacturing Execution System)** can close these gaps – but do you really need it yet?

5 TYPICAL WARNING SIGNS FROM REAL LIFE:

»»» **No real-time data:** You don't know what is currently running on which machine

»»» **Feedback is provided on handouts or in Excel** – often incomplete or delayed

»»» **Downtime is normal,** but no one can say clearly why

»»» **Performance indicators such as OEE, reject rate, or cycle time** are estimated, not measured

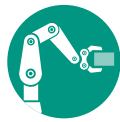

»»» **Audits and traceability** take up unnecessary time

»»» *Do two or more of these points apply to you? Then it's worth talking to us about an MES!*

MES

How much potential is your production wasting every day?

WHAT IS AN MES - AND WHY NOW?

A **Manufacturing Execution System** is the central digital hub between ERP and production. It records, controls, and analyzes all production processes in real time.

The goal: more efficient processes, less downtime, full transparency – without paper, Excel or gut feelings.

AN MES GIVES YOU:

- A clear overview of orders, machines, and employees in real time
- Automated recording of feedback, malfunctions, and quality data
- Early identification of bottlenecks and deviations
- Audit-proof traceability for audits and quality
- A basis for paperless manufacturing and digital transformation
