

The differences between SAP EWM, SAP WM and SAP Stock Room Management at a glance:

SAP EWM (EXTENDED WAREHOUSE MANAGEMENT) - THE SWITCH IS WORTH IT!

SAP Extended Warehouse Management (EWM) is the latest strategic warehouse management solution from SAP. It is a more comprehensive solution with extended features in addition to the classic warehouse management options.

SAP offers EWM in two formats: Basic EWM and Advanced EWM, with the latter being more suitable for warehouses with higher operational complexity. EWM is available in two implementation variants - integrated in SAP S/4HANA or decentralized on an S/4HANA system - both alternatives are available either as an on-premise or cloud solution.

THE ADVANTAGES OF EWM:

1

Future-proof & S/4HANA compatibility

After 2025, **SAP WM** will only be available in the S/4HANA context as a functionally reduced "Stock Room Management" solution.

SAP EWM is SAP's strategic warehouse solution for S/4HANA and is actively being developed further - including integration into cloud solutions (e.g. RISE & GROW with SAP).

3

Integrated warehouse automation

EWM-MFS (material flow control) enables the direct control of automation technology (e.g. conveyor technology, high-bay warehouses, AMR, etc.).

2

Extended range of features & flexibility

SAP EWM offers significantly more features than **SAP WM**, e.g:

- Resource management
- Labor management
- Warehouse task optimization
- Slotting & rearrangement
- Value added services (VAS)

These extended features enable more efficient warehouse management and more detailed process control.

The differences between SAP EWM and SAP Stock Room Management at a glance:

SAP STOCK ROOM MANAGEMENT - WE ACCOMPANY YOU ON YOUR PATH TO THE INTRALOGISTICS OF THE FUTURE!

SAP Stock Room Management (SRM) is a solution for customers who want to continue using their existing SAP WM beyond the year 2025 with SAP S/4HANA. SAP SRM “replaces” SAP WM and can be seen as a simplified version of WM - a “WM Light” almost.

AVAILABLE FEATURES:

Inbound & outbound processing

Inventory management

Inventory

The difference between SAP EWM and SAP WM at a glance:

SAP EWM (Extended Warehouse Management) is SAP's modern and more feature-rich warehouse management software that supports complex logistics processes, such as for example automated warehouses, yard management and precise control of resources. In comparison, SAP WM (Warehouse Management) is an older component within SAP ERP with a limited range of features.

SAP EWM offers far more flexibility, integrated Fiori interfaces and is future-proof within S/4HANA.
